                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2 DNA sequences (AAT62512 and AAT62513) respectively code for primatised forms (AAW01821 and AAW01822) of the light and heavy chain of cynomolgus monkey anti-human B7.1 antigen monoclonal antibody 16C10. Cloned 16C10 light and heavy variable genes are inserted into an expression vector (pref. NEOSPLA) which contains human light and heavy chain constant region genes to allow prodn. of primatised antibodis have also been produced (see also AAW01817-20). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

These can be used in the diagnosis and treatment of various autoimmune disorders, infections and cell proliferation diseases. The diseases include AIDS, adult respiratory distress syndrome, anaemia, asthma, atherosclerosis, cohn's disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, 'osteoarthritis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus, arteriosclerosis, cirrhosis and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human immune system associated proteins (HISAP) and polynucleotides encoding the HISAP, useful for diagnosing, treating or preventing immune or cell proliferative disorders or infections

The invention provides a human monoclonal antibody (I) and its functional fragments specifically reactive with an F protein epitope of respiratory syncytial virus (RSV), and capable of neutralizing infection by the virus such as Glambda-1A or Glambda-1B. The antibody can be expressed by standard recombinant methodology. (I) is useful for detecting RSV by contacting a source suspected of containing RSV with (I) and determining whether (I) binds to the source. (I) is also useful for providing passive immunotherapy prophylactically, to RSV disease in a human. (I) is useful for therapeutic and/or prophylactic treatment of RSV infection in human patients, particularly infants and young children. (I) is also useful as a diagnostic reagent for the determination of RSV mediated disorders or for tracking progress of treatment of the disorders. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human monoclonal antibody and functional fragments, useful for therapeutic and/or prophylactic treatment of respiratory syncytial virus infection, is specifically reactive with the F protein epitope of the virus -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequence represents the continuous DNA sequence of the coding region of the light chain of plasmid Glambda-1Bpcn.

The invention provides a human monoclonal antibody (I) and its functional fragments specifically reactive with an F protein epitope of respiratory syncytial virus (RSV), and capable of neutralizing infection by the virus such as Glambda-1A or Glambda-1B. The antibody can be expressed by standard recombinant methodology. (I) is useful for detecting RSV by contacting a source suspected of containing RSV with (I) and determining whether (I) binds to the source. (I) is also useful for providing passive immunotherapy prophylactically, to RSV disease in a human. (I) is useful for therapeutic and/or prophylactic treatment of RSV infection in human patients, particularly infants and young children. (I) is also useful as a diagnostic reagent for the determination of RSV mediated disorders or for tracking progress of treatment of the disorders. The present sequence represents the continuous DNA sequence of the expression plasmid clambda-1mAb for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ï

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the DNA sequence of a polymucleotide that encodes the light chain variable region (see AAW88465) of the recombinant human monoclonal antibody (MAD) 4BS. 4BS recognises antibodies specific for GD2 antigon antibodies. Antibodies specific for GD2 recognise various cancers including glioblastoma, neuroblastoma, malignant and/or metastatic melanoma, breast adenocarcinoma, malignant adenocarcinoma, small cell lung carcinoma, colon adenocarcinoma and prostate adenocarcinoma. The invention encompasses 4BS derivatives with immunologic specificity for antibodies specific for GD2. These derivatives, or antigon binding fragments, comprise regions of the 4BS VD junction and regions spanning the 4BS CDRs. Other derivatives include Fab, F(ab')2, Fab', scfv and isolated heavy and ight chains. Polymucleotide fragments (see AAX06951-54), both coding and complementary strands, encoding 4BS antibody V regions are also provided, as well as therapeutic plasmids and vectors, including vaccinia virus vectors, comprising these polymucleotides. He has been shown to mimic GD2, and is particularly useful in generating a host immune response to cancer. Products of the invention can be used in the detection and treatment of e.g.

AAX06953) that encodes the light chain variable region (see AAW089465)
of the recombinant human monoclonal antibody (MAB) 485.

of the recombinant human monoclonal antibody (MAB) 485.

crecomises antibodies specific for GD2 antigen antibodies. Such
antibodies recognise various cancers including glioblastoma,
concompasses abs derivatives mail cell lung carcinoma,
colon adenocarcinoma and prostate adenocarcinoma. The invention
encompasses 485 derivatives with immunologic specificity for
antibodies specific for GD2. These derivatives, or antigen binding
fragments, may comprise regions of the 485 VDJ junction and regions
spanning the 485 CDRs. Other derivatives include Reb, F(ab') 2,
confidents apecific for GD2.

fragments (see AAX06951-54), both coding and complementary strands,
encoding 485 antibody V regions are also provided, as well as
encoding 485 antibody V regions are also provided, as well as
encoding 485 antibody V regions are also provided, as well as
encoding 485 antibody V regions are also provided, as well as
encoding 485 antibody V regions are also provided, as well as
encoding 485 antibody V regions are also provided, as well as

                                                                                                                                                                                                                                                         EBV-transformed cell lines and mouse-human heterohybridomas producing human MAbs specific for the gp120 V3 loop of HIV-1 MN isolate were obtained. MAb 447-52D was found to recognise the tetrapeptide motif GPGR, i.e. the Principal Neutralising Determinant common to the V3 loop of different HIV isolates. A recombinant Ab was produced in which the L chain V region was derived from 447-52D and to which a signal sequence and a L chain intronic sequence are appended, fused to a fragment contg. a short intronic segment of the human lambda 2 C region and the human

polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (III) sequences. (I) primers, oligomers, and for chromosome and precombinant production of (II). The companies are also used in diagnostics as expressed sequence tags to ridentifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating classing aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in the produce of the produce of the consider of the remaining classics, forensics, gene mapping, identification of mutations and to produce the transfer of assess by bodiversity and to produce the transfer of assess buddiversity and to produce the transfer of assess buddiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2 DNA sequences (AAT62509 and AAT62510) respectively code for primatised forms (AAW01817 and AAW01818) of the light and heavy chain of cynomolgus monkey anti-human B7.1 antigen monoclonal antibody Cloned Cloned 7C10 light and heavy variable genes are inserted into an expression vector (pref. NEOSPLA) which contains human light and heavy chain constant region genes to allow prodn. of primatised antibody in e.g. CHO cells. Primatised 7B6 and 16C10 anti-B7.1 antibodies have also been produced (see also AAW01819-22). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                 monoclonal antibody binding human B7.1 or B7.2 antigen for treating autoimmune disease or graft-versus-host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGTGACTTCTACCCGGGAGCCGTGACAGTGGCCTGGAAGGCAGATAGCAGCCCCGTCAAG

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 169, Sequence 4, Apple Sequence 4, Apple Sequence 50, Apple S
